

PYTHON PRACTICE #1

Welcome to Python!

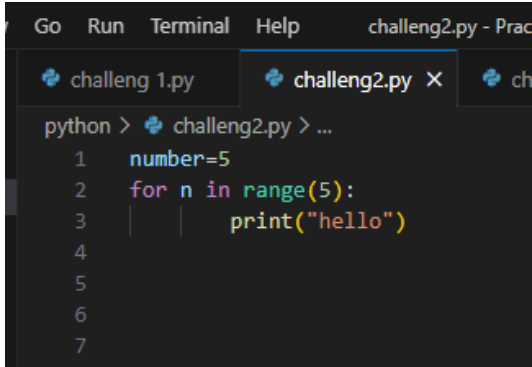

- Go to this Python editor: [Visual studio \(VS Code\)](#)
- Create a Python file name ***"yourFullName.py"***

At the end you must submit this file to the google classroom.

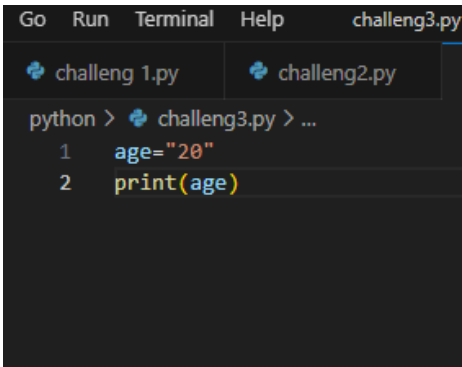

CHALLENGE 1

Instruction	Write this code in the main.py <code>print("PNC")</code> Click on RUN 
Result	It should print this: PNC 

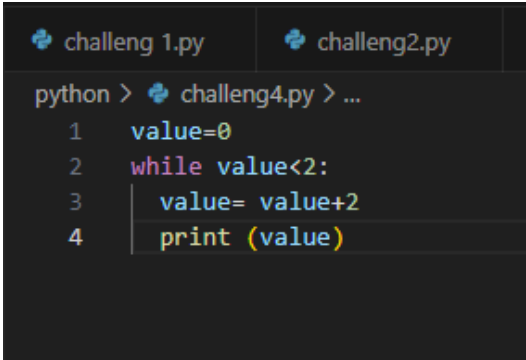

CHALLENGE 2

Instruction	Print "HELLO" 5 times in the monitor
Result	It should print this: HELLO HELLO HELLO HELLO HELLO 

CHALLENGE 3

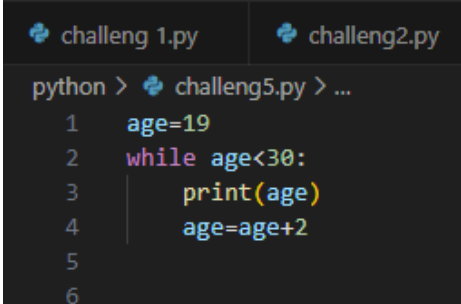

Instruction	<p>Create a variable named age and set its value to 20 Print the value of this variable</p> <p><u>Question</u> : what is difference between :</p> <ul style="list-style-type: none"> - <code>print(age)</code>: print value of the variable named age to screen - <code>print("age")</code>: print text "age" to screen
Result	<p>It should print this: 20</p>  <pre> Go Run Terminal Help challenge3.py challenge 1.py challenge2.py python > challenge3.py > ... 1 age="20" 2 print(age) </pre>

CHALLENGE 4

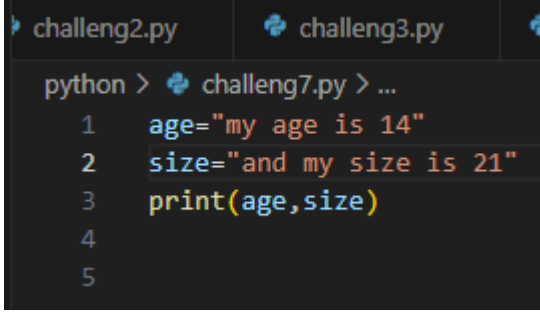

Instruction	<ul style="list-style-type: none"> • Create a variable named value and set its value to 0 • Increment value of 2 • Print value
Result	<p>It should print this: 2</p>  <pre> challenge 1.py challenge2.py python > challenge4.py > ... 1 value=0 2 while value<2: 3 value= value+2 4 print (value) </pre>

CHALLENGE 5

Instruction	<p>Create a variable age that starts at value 19</p> <p>Do the following step 6 times:</p> <ul style="list-style-type: none"> • Print age value • Increment age of 2 <p>Max number of instruction = 4</p>
-------------	---

Result	<p>It should print this:</p> <pre> 19 21 23 25 27 29 </pre> 
--------	--

CHALLENGE 6

Instruction	<p>Create a variable age that starts at value 1</p> <p>As long as age is lower (strictly) than 10:</p> <ul style="list-style-type: none"> • print age • increment age of 1
Result	<p>It should print this:</p> <pre> 1 2 3 4 5 6 7 8 9 </pre> 

CHALLENGE 7

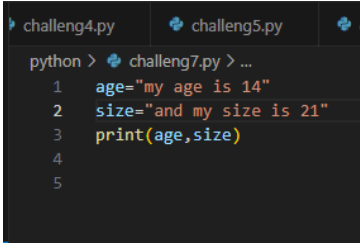

How to print a text and a variable value together?

The following code print the text “Start age” followed by the value of the age variable:

```
print("Start age : ", age)
```

Warning: you need a comma (,) between “Start age” and age !!

Instruction	<p>Create 2 variables</p> <ul style="list-style-type: none"> • age = 14 • size = 21 <p>You shall write the value of those 2 variables with some text, as show on the result</p>
-------------	---

Result	<p>It should print this:</p> <pre>My age is 14 and my size is 21</pre>  <pre>python > challenge7.py > ... 1 age="my age is 14" 2 size="and my size is 21" 3 print(age,size) 4 5</pre>
--------	---

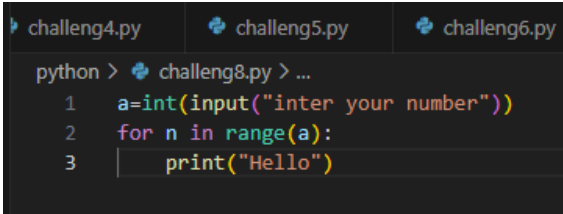

CHALLENGE 8

How to enter a value and store it into a variable ?

The following code get the number **entered from keyboard** and store it into the variable myNumber

```
myNumber = int(input())
```

note: you don't need to know the meaning of int(input()) just know we are getting the number...

Instruction	<p>Get the number entered from keyboard and store it into a variable repetition</p> <p>For the number of repetitions entered by user, display "HELLO" on them monitor</p>
Result	<p>If user enters 4</p> <pre>HELLO HELLO HELLO HELLO</pre> <p>If user enters 2</p> <pre>HELLO HELLO</pre>  <pre>python > challenge8.py > ... 1 a=int(input("inter your number")) 2 for n in range(a): 3 print("Hello")</pre>

CHALLENGE 9:

Instruction	<p>Get the number entered from keyboard and store it into a variable userChoice</p> <ul style="list-style-type: none"> • If the userChoice is equal to 0, display "Good choice !" • Else display "Bad choice !"
-------------	--

Result	<div data-bbox="513 96 722 347"><p>If user enters 0</p><p>Good choice !</p><p>If user enters 4</p><p>Bad choice !</p></div> <div data-bbox="869 136 1259 450"><pre>challenge4.py challenge5.py c python > challenge9.py > ... 1 a=int(input("Enter here")) 2 x="Good choice !" 3 y="Bad choice !" 4 if a==0: 5 print(x) 6 else: 7 print(y)</pre></div>
--------	---
